

HPAC High Precision Air Conditioning

CRAC

Rack Cooler

Rack cooling solutions for high density racks management, from 10 to 75 kW

Superior efficiency, high reliability, low energy consumption

Modern data center are characterized by 24/7 operation all year long.

Climaveneta has developed its own answer: efficient and reliable cooling units for the management of high density racks.

CRC

Rack Cooler

Hot Spot management

CRC unit stands for ideal integration to manage high density servers (blade servers), better known as hot-spots. The advantages are:

- Extra cooling where it is needed
- Direct Expansion systems with Inverter technology or chilled water version available
- Modulating Air flow, thanks to EC high efficiency fans. The fans adapt to the thermal load detected by sensors positioned in the hot and cold aisles
- Perfectly compatible with most of racks and ready for expansion of the cooling system

Scalability and Modularity

The CRC units have been developed to be coupled with modern racks in data centers, allowing:

- More versions available, suitable for 42U and 47U racks
- GREAT SCALABILITY of the cooling system, as the units easily adapt to the real thermal load of the server
- MODULARITY of the cooling system and rapid Upgrade of the Data Center capacity

Active free cooling

The CRC units combine the efficiency of a hydronic system for heat dissipation together with the use of new generation EC fans, allowing EER values over 100. High Density blade servers cooling systems with single or dual circuit allow the use of warm water with a temperature > 15°C. This contributes to improve all those free-cooling systems performances even in places which are normally considered too hot for such efficient systems. In the CRC Dual Circuit version, while the primary circuit (circuit 1) could be water cooled via an external dry cooler in order to maximize the free cooling benefits, the secondary backup circuit (circuit 2) can be easily combined with a Freecooling chiller to obtain best values in terms of REDUNDANCY & EFFICIENCY.

Redundancy and Reliability

Modern data centers have to guarantee an efficient 24/7 operation in order to eliminate the risks of malfunctioning and failure. The total redundancy of the system is therefore of utmost importance for the highest reliability of the data center.

The new Dual Coil version has been developed to guarantee the 100% backup thanks to: double cooling coil and double regulation valve which are completely independent. The reliability of the system is also increased by the use of automatic switch for dual power supply feed for a CONTINUOUS and REDUNDANT power supply.

Versions

Four versions. Four specific technologies specially designed to ensure superior efficiency and reliability.

CRCX Direct Expansion Version

SHR=1 

Savings up to 30%
compared to traditional systems

CONFIGURATIONS

CRCX-I - Direct Expansion Rack Cooler **IN-ROW**

CRCX-E - Direct Expansion Rack Cooler **ENCLOSURE**

The CRCX unit joins the efficiency of a new Direct Expansion system with the use of the Inverter Technology and the latest brushless DC electric motor. Good performance and high efficiency are the result of the adoption of advanced technologies:

- The Inverter DC technology on the Scroll compressor with the new generation brushless motor
- The electronic thermostatic valve: it allows to improve the inverter compressor performance, and the frigorific cycle optimisation
- New generation EC brushless fans ultralight
- Completely sensible load (SHR=1)
- 'HOT SWAPPABLE' EC fans from the front
- Easy handling due to integrated wheels

CRCC Chilled water version

vAIR
Variable Air Flow

25% bigger savings
thanks to the adaptive set
point according to the real thermal load

CONFIGURATIONS

CRCC-I - Chilled Water **IN-ROW**

CRCC-E - Chilled Water **ENCLOSURE**

In the hydronic version the cooling is provided by external chillers and dry coolers, to better use the freecooling system. Good performance and high efficiency are the result of the adoption of advanced technologies:

- New generation EC brushless fans ultralight
- 3 way or 2 way (optional) modulating valves
- Capacity from 16 to 74 kW
- Optimal integration with Climaveneta Freecooling chillers
- 'HOT SWAPPABLE' EC fans from the front
- Easy handling due to integrated wheels

HPAC High Precision Air Conditioning

CRC

Rack Cooler

CRC D

Dual Fluid Version

SHR=1

100% backup
Reliability all year long

CONFIGURATIONS

CRC D-I - Direct Expansion Dual Fluid Rack **IN-ROW**

CRC D-E - Direct Expansion Dual Fluid Rack **ENCLOSURE**

The Dual Fluid Rack Cooler features two separate circuits for the highest redundancy in cooling capacity. Thanks to a system ensuring 100% back-up, the high reliability of the system is always guaranteed, also in emergency situations.

- Inverter DC Scroll compressor featuring last-generation electronic-switching brushless motor
- Electronic expansion valve to ensure superior performance of the inverter compressor and frigorific cycle optimisation
- New generation ultralight fans, with EC brushless motor
- Complete sensible load (SHR=1)
- Easy handling due to integrated wheels
- Hot swappable EC fans from the front

CRC F

Free Cooling Version

Active
FreeCooling

60% of the year in free
cooling mode

CONFIGURATIONS

CRC F-I - Direct Expansion Rack with indirect free cooling **IN-ROW**

CRC F-E - Direct Expansion Rack with indirect free cooling **ENCLOSURE**

The CRC F Rack Cooler ensures high levels of energy efficiency thanks to the combination of the direct expansion system with the indirect free cooling mode. The CRC F unit works in free cooling mode when the outside temperature allows to use the outdoor air as a source of indirect cooling. The simultaneous operation of the expansion system and the water system contributes to increase the overall efficiency.

- Inverter DC Scroll compressor featuring last-generation electronic-switching brushless motor
- Electronic expansion valve to ensure superior performance of the inverter compressor and frigorific cycle optimisation
- New generation ultralight fans, with EC brushless motor
- Complete sensible load (SHR=1)
- Easy handling due to integrated wheels
- Hot swappable EC fans from the front

Configurations

Modern data centers are characterised by specific requirements: specific room dimensions, redundancy, easy adaptation to preexisting structures. This is why Climaveneta has developed two CRC configurations: In-row and Enclosure.

In-Row

- CRCC-I:** Chilled Water
- CRCX-I:** Direct Expansion
- CRCD-I:** Dual Fluid
- CRCF-I:** Free Cooling

In the InRow configuration the treated air is sucked in the back of the unit from the hot aisle of the Data Center (35°C), with great advantages in terms of energy efficiency and increased cooling capacity. The air is then cooled and delivered to the cold aisle (18-20°C) - i.e. the front side of the rack.

Features and Benefits

Design

- Back-Up system for power and cooling
- Hot swappable EC fans from the front
- Scalability and modularity
- Data Center extension

Energy Savings

- Cooling only where it is needed
- Optimised management of the system
- Extreme flexibility (applicability to 42U & 47U racks)

Highly efficient Operation

- Reduced space occupancy (0,39 m²)
- Plug & Play connections for a quick and easy installation
- User-friendly Cascade System for electrical panel maintenance
- Humidification System (optional)

Ideal for hot/cold aisles

HPAC High Precision Air Conditioning

CRC

Rack Cooler

Enclosure

- CRC-E:** Chilled Water
- CRCX-E:** Direct Expansion
- CRC-D-E:** Dual Fluid
- CRC-F-E:** Free Cooling

In the Enclosure configuration both the servers and the conditioners are coupled on the same structure, avoiding the mixing of indoor and outdoor air and the consequent efficiency reduction. The air is directly treated inside the rack; sucked at 46°C, cooled down to 25- 30°C and then delivered back to the servers. This increases energy saving thanks to the low amount of treated air.

Features and Benefits

Design

- Back-Up system for Power and Cooling
- Hot swappable EC fans from the front
- Scalability and modularity
- Data Center extension

Energy Savings

- Increased energy savings thanks to the low amount of treated air
- Optimised blade management
- Extreme flexibility (applicability to 42U & 47U racks)

Highly efficient Operation

- Reduced space occupancy (1,8 m²)
- Plug & Play connections for a quick and easy installation
- User-friendly Cascade System for electrical panel maintenance
- Humidification System (optional)

Ideal for removing hot spots in stand alone systems

Technological choices

DC Inverter compressor for the CRCX, CRCF and CRCD versions

The inverter driven compressor, through the variable frequency, modulates the power capacity provided, hence enabling to optimize the performances at part load and increasing the overall efficiency of the system in any condition.

Compared to the traditional On/Off compressors the Inverter compressor ensures:

- Quick achievement of the desired temperature thanks to the BOOSTER function
- Starting current & pick removal due to compressor speed and air flow modulation
- Reduced vibrations and low noise levels
- Efficient working performance at partial loads

EC-PUL fans for all indoor units

PUL POLYMERIC ULTRALIGHT FAN

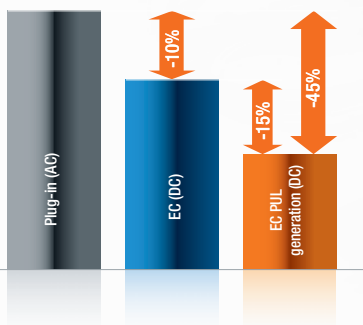

The high efficiency EC brushless fan reduces both noise levels as well as energy consumption, and assures a variable air flow at part loads, optimizing the operating costs of the unit.

Main features:

- Further noise level reduction 4-5 dB
- Further absorbed power reduction by 15%

EC-PUL FANS also for outdoor units

The use of EC brushless technology even on the remote motocondenser (optional) fan assures a further average reduction of noise levels by 10%, together with a strong reduction of energy consumption by 45% compared to traditional condensers with AC technology.

HPAC High Precision Air Conditioning

CRC

Rack Cooler

Electronic Thermostatic Valve

The Direct Expansion CRC units with DC Inverter compressor make use of electronic expansion valve as standard.

These valves have a much wider modulation capacity. It stands out for its quality of control and its capacity to quickly reach and maintain the operating stability of the unit. Joined with the INVERTER compressor technology, the valve ensures a quick fluctuation-free regulation, and therefore a highly accurate adjustment to the swings of load and ambient conditions.

Ecologic Refrigerant

The R-410A represents the most modern and look-ahead choice in refrigerant technology: it clearly contributes to make the ICT GREEN since it complies with environmental friendly policies and provide enhanced cooling efficiency.

The R-410A represents the most efficient long-term solution; it contributes to increase the energy efficiency up to 5-6% compared to the R-407c refrigerant, avoiding air pollution.

Evolution Control

IDM INTEGRATED DYNAMIC
MANAGEMENT OF THE TEMPERATURE

The units are provided with a new algorithm called IDM-INTEGRAL DYNAMIC MANAGEMENT, which allows to avoid the stratification of the air temperature inside the rack through the use of 4 integrated and independent sensors (2 for aspiring and 2 for leaving). On the basis of the real load in each single blade, the sensors contribute to improve the ventilation efficiency, working where it is requested. This helps to maximize the energy efficiency. L'IDM guarantees the optimal air temperature and humidity management via a dynamic system able to avoid local condensation thus maintaining SHR = 1-
